

Proof of maintenance

The diagram illustrates a four-point bending test setup. A horizontal beam is supported at two points (labeled 5) and loaded at two points (labeled 1, 2, 3, 4). The beam is shown in a perspective view, with the supports and loading points clearly marked. The beam is supported by two vertical supports (labeled 5) and loaded by two vertical loads (labeled 1, 2, 3, 4). The beam is shown in a perspective view, with the supports and loading points clearly marked.

5. In order to check for rot at wooden parts, uncover the foundations once a year.

Special notes, e.g. for repairs
