

The equipment must be checked for correct operation and safety, especially the points listed below:

Proof of maintenance

Wooden parts

1. Check for rot and, if necessary, smooth out splinters and round off sharp edges of cracks.
2. Check that all bolts and screws are tight and retighten if necessary.
3. **Recommendation:** apply paraffin wax to the upper end grain areas once a year, please refer to Order No. 0.90100, 1 litre.

Ropes and rope connections

4. Check ropes for wear and tear, if the steel reinforcement is damaged, it is imperative it be replaced.
5. Check that ropes are securely connected, retighten screws/bolts if necessary.
6. Check that the clamps holding the ropes are connected firmly.

- ## Important!

It should not be possible to form loops with the handrail ropes.

Structural stability

7. In order to check steel feet for corrosion, uncover the foundations once a year.

A diagram illustrating a three-dimensional coordinate system. It features a vertical axis (1) and two horizontal axes (2 and 3) originating from a central point (4). The vertical axis is labeled (1) at the top and (2) at the base. The horizontal axes are labeled (3) and (2) at their ends. A curved line (5) connects the two horizontal axes. A curved line (6) connects the vertical axis to the horizontal axis (2). A curved line (7) connects the vertical axis to the horizontal axis (3). The diagram is labeled with circled numbers 1 through 7.

Special notes, e.g. for repairs

**Repair not carried out,
it is still possible to play on equipment**

**Repair not carried out,
equipment is taken out of action**

**All work carried out,
everything is in order**
