The diagram illustrates a mechanical system for a water pump. It consists of four main components labeled 1 through 4:

- 1**: A motor or engine unit, shown as a cylindrical component with a shaft extending from the top.
- 2**: A pump or impeller assembly, connected to the motor's shaft. It features a central hub with two curved blades or vanes.
- 3**: A drive belt or chain, which connects the motor's shaft to the pump's shaft, transmitting mechanical power.
- 4**: A rectangular tank or container, partially filled with water. The pump assembly (2) is submerged in the water, and the drive belt (3) is also submerged, likely to provide cooling or lubrication.
