

Proof of maintenance

The diagram shows the sequential construction of a cable-stayed bridge in seven numbered steps:

- 1:** Erection of the first pylon.
- 2:** Installation of the first stay cables.
- 3:** Completion of the first pylon and stay cables.
- 4:** Erection of the second pylon.
- 5:** Installation of the second set of stay cables.
- 6:** Completion of the second pylon and stay cables.
- 7:** Final completion of the bridge structure, including the deck and approach spans.

- Have trained personnel check the condition of the concrete columns **twice** a year. Dig around the columns down to the foundation before carrying out this step.
