

Proof of maintenance

A diagram of a simple lever system. A horizontal beam (1) is supported by a fulcrum (2) in the center. A load (3) is placed on the left end of the beam, and a smaller load is placed on the right end. The fulcrum is represented by a vertical rod passing through a cube-shaped base. The load is represented by a dashed outline of a cube on the left end of the beam.

3. In order to check the steel tubes for corrosion, uncover the foundations once a year.
